

Enerflex in action

Kuwait

104 MMSCFD gas processing and treating facilities

Tertiary title

Enerflex teams from Abu Dhabi, Houston, and Calgary joined forces to implement two large contracts for natural gas compression, processing, and treating facilities for a customer in Kuwait. These impressive 104 MMSCFD facilities required Enerflex to engineer, design, manufacture, install, and commission eight gas compressors, propane refrigeration systems, amine packages, TEG units, and a multitude of other equipment covering the full scope of the project.

Outcome

Scheduled to both come on stream one year later, Enerflex delivered these projects successfully on-time and on-budget. Enerflex's ability to secure these large-scale projects is a testament to our global reach, extensive capabilities, knowledge, and the collaborative dynamic that exists within the organization.
