☒ Rule 13p-1 under the Securities Exchange Act (17 CFR 240.13p-1) for the reporting period from January 1 to December 31, 2024.

Section 1 - Conflict Minerals Disclosure

Enerflex Ltd. (“Enerflex”, the “Company”, “we”, “our”) deploys and services high-quality sustainable energy infrastructure. The Company's comprehensive portfolio includes compression, processing, cryogenic, and treated water solutions, spanning all phases of a project's lifecycle, from front-end engineering and design to after-market services. Enerflex is optimally positioned to serve its client partners in core markets, enhancing long-term shareholder value through sustainable improvements in efficiency, profitability, and cash flow generation. Headquartered in Calgary, Alberta, Canada, the Company has operations in 17 countries across North America, Latin America, and the Eastern Hemisphere. With over 700,000 sq. ft. of manufacturing capability in three fabrication facilities across North America, Enerflex delivers high-quality, long-life solutions globally.

As part of our business, we manufacture products for which gold, tantalum, tin and/or tungsten (collectively, “3TG materials”) are necessary to the functionality or production of our products. We are required to comply with Rule 13p-1 of the Securities Exchange Act of 1934, as amended, as implemented through SEC Specialized Disclosure Report on Form SD (“Rule 13p-1”). Accordingly, in compliance with Rule 13p-1, we are filing this Specialized Disclosure Report on Form SD and the Conflict Minerals Report filed as Exhibit 1.01 hereto, and have contemporaneously posted this Specialized Disclosure Report on Form SD and the Conflict Minerals Report on our website at www.enerflex.com.

Item 1.01 Conflict Minerals Disclosure and Report

A copy of Enerflex Ltd.’s Conflict Minerals Report for the reporting period January 1, 2024 to December 31, 2024 is provided as Exhibit 1.01 hereto and is publicly available on our website at www.enerflex.com.

Item 1.02 Exhibit

The Conflict Minerals Report required by Item 1.01 is filed as Exhibit 1.01 to this Form SD.

Section 2 – Exhibits

Item 2.01 Exhibits

Exhibit No.	Description
1.01	Conflict Minerals Report as required by Items 1.01 and 1.02 of this Form.

SIGNATURES

Pursuant to the requirements of the Securities Exchange Act of 1934, the registrant has duly caused this report to be signed on its behalf by the duly authorized undersigned.

Conflict Minerals Report

Company and Product Overview

The Company

Enerflex deploys and services high-quality sustainable energy infrastructure. The Company's comprehensive portfolio includes compression, processing, cryogenic, and treated water solutions, spanning all phases of a project's lifecycle, from front-end engineering and design to after-market services. Enerflex is optimally positioned to serve its client partners in core markets, enhancing long-term shareholder value through sustainable improvements in efficiency, profitability, and cash flow generation.

Headquartered in Calgary, Alberta, Canada, the Company has operations in 17 countries across North America, Latin America, and the Eastern Hemisphere. With over 700,000 sq. ft. of manufacturing capability in three fabrication facilities across North America, Enerflex delivers high-quality, long-life solutions globally.

Our global 45-year success is built on the foundation of our shared Vision: Transforming Energy for a Sustainable Future, propelled by a long-term strategy anchored in the following foundational pillars: technical excellence in modularized energy solutions; profitable growth achieved through vertically integrated and geographically diverse product offerings; financial strength and discipline; and sustainable returns to shareholders.

Enerflex's stable Energy Infrastructure ("EI") business generates steady, recurring revenue. It is through this offering Enerflex owns, operates, and manages critical infrastructure under contract for its client partners' operations. The Engineered Systems ("ES") product line is the sale of customized modular natural gas- handling and produced water solutions, enabling removal of natural gas liquids (NGLs), oil processing technology, and treated water applications. After-market Service ("AMS") includes installation, commissioning, operations and maintenance, and parts sales, along with global support for all product lines. Through its EI and AMS product lines, Enerflex continues to build an increasingly resilient and sustainable business, stabilizing cash flows over the long term and reducing cyclicalities in the business.

Enerflex's expert teams of professionals, industry-certified mechanics and technicians, and tradespeople cover the key disciplines of engineering, design, manufacturing, construction, commissioning, asset maintenance, and service, and are strategically situated across a network of locations globally.

Conflict Minerals Compliance Program - Overview

Enerflex has taken a number of steps to implement a conflict minerals compliance program, including:

- Enerflex has assembled an internal team to support supply chain due diligence.
- Enerflex has determined that some of the products it manufactures include 3TG materials. These 3TG materials are necessary to the functionality or production of such products.
- Enerflex is working with its suppliers and has identified many of the smelters or refiners ("SORs") in its supply chain and plans to take measures intended to increase the supplier response rate for its reasonable country of origin inquiry ("RCOI") process.
- Enerflex has compared its RCOI results with information collected via independent conflict free smelter validation programs such as the Conflict Free Smelter Program sponsored by the Conflict Free Sourcing Initiative an initiative of the Electronic Industry Citizenship Coalition and Global e-Sustainability Initiative ("EICC/GeSI").
- Enerflex reports annually, as required by Rule 13p-1, as implemented through SEC Specialized Disclosure Report on Form SD, on its sourcing due diligence efforts. This Report and the Form SD of which it is a part of are publicly available on our website at www.enerflex.com.

Enerflex's manufactured products are primarily assembled using components obtained from its suppliers. Enerflex is several tiers removed from mining operations and SORs and has no visibility into the upstream supply chain beyond its direct suppliers. Enerflex thus had to request its suppliers' assistance in collecting information regarding the presence of 3TG materials in the components supplied to Enerflex and, if present, information regarding the sourcing of such 3TG materials.

Information on the presence and sourcing of 3TG materials in the components supplied to Enerflex is collected and stored using an online platform provided by a third party vendor, Source Intelligence. This platform utilized the EICC-GeSI Conflict Minerals Due Diligence Template (the "EICC-GeSI Template"), which includes standard supply chain survey and information tracking methods, to determine whether Enerflex's manufactured products contain 3TG materials necessary to their functionality or production and to perform its RCOI.

In an effort to increase awareness among Enerflex's suppliers of its conflict minerals compliance program, as well as the applicable SEC regulations and related frequently asked questions concerning conflict minerals compliance, Source Intelligence introduced each of Enerflex's identified suppliers to the Conflict Minerals Supplier Resource Center maintained by Source Intelligence on its website. Enerflex undertook this step as an elevated tool to facilitate a deeper understanding of its conflict minerals program and why Enerflex is requesting information from them.

Conflict Minerals Compliance Program - Description

The U.S. Securities and Exchange Commission (SEC) Final Conflict Minerals Rule ⁽¹⁾ (SEC Final Rule) requires a three-step compliance process: the first step is determining the applicability of the rule; the second step is conducting a RCOI to determine whether or not there is reason to believe that 3TG, also referred to as conflict minerals, from the Democratic Republic of Congo or adjoining countries, are present in the company's products; and if so, the third step is conducting due diligence to determine the source and origin of those conflict minerals based on the facilities (SORs) in which they were processed. Companies requiring due diligence must use a nationally or internationally recognized standard such as the OECD Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas (OECD Guidance ⁽²⁾) to meet the SEC regulatory requirements. The sections below describe Source Intelligence's approach to meet each of the three steps in the SEC Final Rule compliance process; these activities were completed in concert with Enerflex's internal regulatory compliance program activities.

⁽¹⁾ Securities and Exchange Commission, 17 CFR Parts 240 and 249b, <http://www.sec.gov/rules/final/2012/34-67716.pdf>.

⁽²⁾ OECD Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas, <http://www.oecd.org/daf/inv/mne/GuidanceEdition2.pdf>.

SEC Final Rule Applicability Determination

The first step in SEC Final Rule compliance is examining rule applicability to a given organization's activities. According to the Final Rule, there are four decision criteria: (1) whether the organization files reports with the SEC under Sections 13(a) or 15(d) of the Exchange Act; (2) whether the organization manufactures or contracts to manufacture products; (3) whether conflict minerals are "necessary to the functionality" or "necessary to the production" of such products and (4) whether the necessary conflict minerals were outside the supply chain prior to January 31, 2013.⁽³⁾

Enerflex determined that the SEC Final Rule applies to it based on the above criteria, and it engaged Source Intelligence to assist it with the RCOI process.

Reasonable Country of Origin Inquiry

Enerflex provided to Source Intelligence a list of Tier 1 suppliers believed to be in-scope for regulatory purposes based on Enerflex's influence over the manufacturing process (i.e., meeting the manufacture or contract to manufacture definitions in Rule 13p-1) and potential use of 3TG materials in the products supplied to Enerflex.

The RCOI began with an introduction email from Enerflex to suppliers describing the Conflict Minerals Compliance Program (CMCP) requirements and identifying Source Intelligence as a partner in the process. Following that introduction email, Source Intelligence sent a subsequent email to suppliers containing a registration and survey request link for the on-line data collection platform.

Enerflex provided Source Intelligence with at least one method of contact for each Tier 1 supplier designated by Enerflex as in-scope (email address, telephone number, facsimile number, or mailing address). Email was the preferred method of communication. Following the initial introductions to the program and information request, up to 5 reminder emails were sent to each non-responsive supplier requesting survey completion.

Prior to being asked to provide conflict minerals data, the identified suppliers were asked a series of questions to determine whether the products they supply to Enerflex contain 3TG materials which are necessary to the functionality or production, whether Enerflex influences the design of such products, and whether the products were supplied to Enerflex during the 2024 reporting year. This information was used to further define which suppliers were in scope for regulatory purposes and thus asked to provide additional conflict minerals information.

To complete the RCOI, Source Intelligence engaged the suppliers determined to be in scope, to collect information about the presence and sourcing of 3TG materials used in the products and components supplied to Enerflex, with the ultimate goal of identifying the SORs and associated mine countries of origin. The program utilized the Responsible Minerals Initiative's Conflict Minerals Reporting Template ("CMRT"). Only CMRT's version 6.4 or higher were accepted. Suppliers were offered two options to submit the required information, either by uploading the CMRT in MS Excel format or by completing an online survey version of this template directly in the Source Intelligence platform. In certain cases, if a supplier was unable to complete on the platform, Enerflex or Source Intelligence uploaded the CMRT on their behalf.

Enerflex chose to give their suppliers the ability to share information at a level with which they were most comfortable, i.e. company, product or user-defined, but the declaration scope had to be specified. Suppliers who had already performed a RCOI through the use of the CMRT had the option to upload this document into the Source Intelligence system or to provide this information in the online survey version.

Suppliers were requested to provide an electronic signature before submitting their data to Enerflex to verify that all answers submitted were accurate to the best of the supplier's knowledge, but the suppliers were not required to provide an electronic signature to submit their data.

⁽³⁾ Conflict minerals are considered "outside the supply chain" if they were smelted or refined or were outside of a covered country prior to January 31, 2013.

New Information Cut-off

In recognition that the information requested can take time to collect and aggregate, suppliers were given a final deadline of April 11, 2025 to provide information about the metal processors present in their supply chains for the 2024 reporting year.

Quality Assurance

Supplier responses were evaluated for plausibility, consistency, and gaps. If any of the following “quality control” (QC) flags were raised, suppliers were automatically contacted by the Source Intelligence platform on a bi-weekly basis up to 3 contacts.

- One or more SORs were listed for an unused metal;
- SOR information was not provided for a used metal, or SOR information provided was not a verified metal processor ⁽⁴⁾ ;
- Supplier answered yes to sourcing from the Democratic Republic of the Congo or adjoining countries (“DRC”), but none of the SORs listed are known to source from the region;
- Supplier indicated that they have not received conflict minerals data for each metal from all relevant suppliers;
- Supplier indicated they have not identified all of the SORs used for the products included in the declaration scope;
- Supplier indicated they have not provided all applicable SOR information received; and
- Supplier indicated 100% of the 3TG materials for products covered by the declaration originates from scrap/recycled sources, but one or more SORs listed are not known to be exclusive recyclers.

⁽⁴⁾ Source Intelligence maintains a smelter/refiner database to document which companies are known metal processors (i.e., verified), which companies are exclusive recyclers, mine country of origin information, and DRC conflict-free certification status. Source Intelligence collects SOR data submitted by suppliers via CMRTs and compares it against its existing database. Supplier responses listing entities that are not verified smelters/refiners are flagged and suppliers are asked for further clarification.

RCOI Results

A total of 658 Tier 1 suppliers were identified as in-scope for conflict mineral regulatory purposes and contacted as part of the RCOI process conducted by Source Intelligence. The response rate among these suppliers was 22%. Of these responding suppliers, 34% indicated one or more of the regulated metals as necessary to the functionality or production of one or more products supplied during 2024. Source Intelligence provided Enerflex a RY 2024 CMCP Data Summary with detailed information regarding the smelters/refiners reported to be in Enerflex’s supply chain and the associated mine countries of origin. Based on Source Intelligence’s smelter/refiner database, and as shown in the CMCP Data Summary, there was an indication of DRC sourcing or location in the DRC for 49 out of 368 verified smelters/refiners ⁽⁵⁾.

Source Intelligence Due Diligence Process

For those supply chains with SORs that are known or thought to be sourcing from the DRC, additional investigation is needed to determine the source and chain-of-custody of the regulated metals. Source Intelligence relies on the following internationally accepted audit standards to determine which SORs are considered “DRC Conflict Free”: the Responsible Minerals Assurance Process (RMAP), the London Bullion Market Association Good Delivery Program, and the Responsible Jewellery Council Chain-of-Custody Certification. Source Intelligence has become an official vendor member of the Responsible Minerals Initiative (RMI) to further facilitate the exchange of supply chain data and technical information in the quest for global ethical sourcing of materials. This membership provides Source Intelligence access to the following working groups: Engage with the CMRT Development Team, Smelter Engagement Team, Smelter Data Management Team, RMI Stakeholders Call, and RMI Plenary.

If the SOR is not certified by these internationally-recognized schemes, Source Intelligence attempts to contact the SOR to gain more information about their sourcing practices, including countries of origin and transfer, and whether there are any internal due diligence procedures in place or other processes the SORs takes to track the chain-of-custody on the source of its mineral ores. Relevant information to review includes: whether the SOR has a documented, effective and communicated conflict-free policy, an accounting system to support a mass balance of materials processed, and traceability documentation. Internet research is also performed to determine whether there are any outside sources of information regarding the SOR’s sourcing practices. Up to three contact attempts are made by Source Intelligence to SORs to gather information on mine country of origin and sourcing practices.

A list of Enerflex’s SORs with indications of RMI Country Risk Levels along with certification statuses was provided in the Source Intelligence RY 2024 CMCP Data Summary. Table 1 lists those SORs according to the 3TG metal they produce, showing the country where each one is located, its RMI Smelter ID, and its Conflict-Free Certifications (if any). Table 2 summarizes the possible countries of origin of the 3TG materials in Enerflex’s supply chain.

⁽⁵⁾ The information in the smelter/refiner database begins with supplier-provided information (CMRT data); Source Intelligence then performs additional research (internet, industry and government associations) and outreach (email and telephone) directly with these companies to confirm the data provided via CMRTs. The Source Intelligence Smelter Verification and Outreach Process includes research in an attempt to verify types of metal processing performed (including exclusive recycling), mine countries of origin, conflict-free certification status, and due diligence measures being conducted for those entities who are not conflict-free certified.
