SPECIALIZED DISCLOSURE REPORT

ENERFLEX LTD.

(Exact name of registrant as specified in its charter)

Canada (Federal Level)
(State or Other Jurisdiction
of Incorporation or Organization)

001-41531
(Commission
File Number)

98-0457703
(IRS Employer
Identification No.)

Suite 904, 1331 Macleod Trail S.E.
Calgary, Alberta, Canada, T2G 0K3
(Address of Principal Executive Offices) (Zip Code)

Andrew Baird (281) 836-7000
(Name and telephone number, including area code, of the person to contact in connection with this report.)

Check the appropriate box to indicate the rule pursuant to which this form is being filed, and provide the period to which the information in this form applies:

Rule 13p-1 under the Securities Exchange Act (17 CFR 240.13p-1) for the reporting period from January 1 to December 31, 2022.

Section 1 - Conflict Minerals Disclosure

Headquartered in Calgary, Alberta, Canada, Enerflex Ltd. (“Enerflex”), its subsidiaries, interests in associates, and joint ventures, operate in over 90 locations globally. In October 2022, Enerflex acquired Exterran Corporation, creating a premier integrated global provider of energy infrastructure and energy transition solutions. With enhanced scale and capabilities, Enerflex is optimally positioned to serve customers in key natural gas, energy transition, and produced water markets. As part of our business, we manufacture products for which gold, tantalum, tin and/or tungsten (collectively, “3TG materials”) are necessary to the functionality or production of our products. We are required to comply with Rule 13p-1 of the Securities Exchange Act of 1934, as amended, as implemented through SEC Specialized Disclosure Report on Form SD (“Rule 13p-1”). Accordingly, in compliance with Rule 13p-1, we are filing this Specialized Disclosure Report on Form SD and the Conflict Minerals Report filed as Exhibit 1.01 hereto, and have contemporaneously posted this Specialized Disclosure Report on Form SD and the Conflict Minerals Report on our website at www.enerflex.com.

Item 1.01 Conflict Minerals Disclosure and Report

A copy of Enerflex Ltd.’s Conflict Minerals Report for the reporting period January 1, 2022 to December 31, 2022 is provided as Exhibit 1.01 hereto and is publicly available at www.enerflex.com.

Item 1.02 Exhibit

The Conflict Minerals Report required by Item 1.01 is filed as Exhibit 1.01 to this Form SD.

Section 2 - Exhibits

Item 2.01 Exhibits

<u>Exhibit No.</u>	<u>Description</u>
1.01	Conflict Minerals Report as required by Items 1.01 and 1.02 of this Form.

SIGNATURES

Pursuant to the requirements of the Securities Exchange Act of 1934, the registrant has duly caused this report to be signed on its behalf by the duly authorized undersigned.

 Interim Chief Financial Officer

Enerflex Ltd.

Conflict Minerals Report

Company and Product Overview

The Company

On October 13, 2022, Enerflex acquired Exterran Corporation (“Exterran”), creating a premier integrated global provider of energy infrastructure and energy transition solutions. With enhanced scale and capabilities, Enerflex is optimally positioned to serve customers in key natural gas, energy transition, and water treatment markets, which is expected to enhance long-term shareholder value through sustainable improvements in efficiency, profitability, and cash flow generation. Enerflex’s operations were very complementary with Exterran’s, and the combined company will diversify operations across key growth regions where the Company already has a presence, and to provide offerings to a broader base of customers. Additionally, Enerflex’s scale of operations and depth of technical expertise provides an advantage over competitors. Our product offerings have been strengthened by the acquisition. Energy Infrastructure covers critical infrastructure that Enerflex owns, operates, and manages under contract to its customers’ operations. Engineered Systems is the sale of customized modular natural gas-handling and low-carbon solutions, further enhanced by Exterran’s expanded capabilities which enable deeper removal of NGL’s, processing technology, and water treatment applications. The After-Market Services offerings include installation, commissioning, operations, maintenance, retrofits, rebuild, and parts sales, along with global support for all product lines.

Enerflex’s Vision of *Transforming Energy for a Sustainable Future* is supported by a long-term strategy that is founded upon the following key pillars: technical excellence in modularized energy solutions; profitable growth achieved through vertically integrated and geographically diverse product offerings; financial strength and discipline; and sustainable returns to shareholders. Through consistent execution of this strategy and regular evaluation of the Company’s capital allocation priorities and decisions, Enerflex has managed a resilient business to create shareholder value over its 40-plus-year history.

Enerflex delivers energy infrastructure and energy transition solutions across the globe by leveraging its enhanced presence in growing natural gas markets. The Company’s vertically integrated suite of product offerings includes processing, cryogenic, compression, refrigeration, electric power, and treated water solutions, spanning all phases of a project’s life-cycle, from front-end engineering and design to after-market service. Enerflex has proven expertise in delivering low-carbon solutions, including carbon capture utilization and storage, electrification, renewable natural gas, and hydrogen solutions, and works closely with its customers to help facilitate global decarbonization efforts.

Headquartered in Calgary, Alberta, Canada, the Company has nearly 5,000 employees worldwide. Enerflex, its subsidiaries, interests in associates and joint operations, operate in over 90 locations globally, including in: Canada, the United States of America (“USA”), Argentina, Bolivia, Brazil, Colombia, Ecuador, Mexico, Peru, the United Kingdom, the Netherlands, United Arab Emirates (“UAE”), Bahrain, Oman, Egypt, Kuwait, India, Iraq, Nigeria, Pakistan, Saudi Arabia, Australia, China, Indonesia, Malaysia, Singapore, and Thailand.

Enerflex has state-of-the-art fabrication and workshop facilities in Calgary, Alberta, Canada; Houston, Texas, USA; Broken Arrow, Oklahoma, USA; Sharjah, UAE; Brisbane, Queensland, Australia, delivering standard or custom, long-life operating systems – globally. Enerflex is one of the leading suppliers of natural gas compression infrastructure within the energy infrastructure market in the USA, Canada, Latin America, and the Middle East, with a global energy infrastructure fleet of nearly two million horsepower. The Company is a highly qualified service provider with industry-certified mechanics and technicians strategically situated across a network of service locations across the globe.

Energy Infrastructure

The Energy Infrastructure product line includes infrastructure solutions under contract for natural gas processing, compression, produced water, and electric power equipment. Our infrastructure is deployed across the globe, and provides comprehensive contract operations services to customers in each of those regions. Our Energy Infrastructure product line provides customers with trained personnel, equipment, tools, materials, and supplies to meet their natural gas processing, compression, produced water, and power generation needs, as well as designing, sourcing, installing, operating, servicing, repairing, and maintaining equipment owned by the Company necessary to provide these services.

Enerflex also leverages its extensive expertise in engineering, designing, manufacturing, constructing, operating, and maintaining natural gas compression and processing infrastructure solutions on a Build-Own-Operate-Maintain (BOOM) basis. Enerflex's BOOM project model provides customers with an operational partnership that mitigates risk while keeping objectives aligned. Through this model, Enerflex handles all phases of a project, including the up-front cost of, and responsibility for, construction and commissioning, ensuring quality, safety, and reliability are consistent through the project life.

These activities give rise to the receipt of future cash payments of varying terms, even though they have different accounting treatments depending on the terms of the lease.

After-Market Services

Enerflex's After-Market Services product line provides after-market mechanical services, parts distribution, operations and maintenance solutions, equipment optimization and maintenance programs, manufacturer warranties, exchange components, long-term service agreements, and technical services to our global customers. The product line operates through an extensive network of branch offices and generally provides its services at the customer's wellsite location using trained technicians and mechanics. Enerflex's after-market service and support business includes distribution and remanufacturing facilities, with significant presence situated in active natural gas producing areas, hundreds of service vehicles and skilled mechanics, and a sizable inventory of original equipment manufacturer ("OEM") parts from key manufacturers. Enerflex services a large base of natural gas compression and storage facilities installed in North America, Latin America, and Eastern Hemisphere. In addition, Enerflex provides contract operations and maintenance for large natural gas facilities in the Middle East, Latin America, and other markets.

Engineered Systems

The Engineered Systems product line is comprised of the following product offerings: processing, cryogenic, compression, refrigeration, electric power, treated water, and carbon capture solutions. Enerflex can combine one or more of these product offerings into an Integrated Turnkey solution ("ITK"), including civil works, piping and structural fabrication, and electrical, instrumentation, controls, and automation, as well as installation and commissioning. Enerflex's ITK offerings allows customers to simplify their supply chain, eliminate interface risk, and reduce the concept-to-commissioning cycle time of major projects.

Compression packages range from low-specification field compressors to high-specification process compressors for onshore and offshore applications. The Company provides retrofit solutions, including re-engineering, re-configuration, and re-packaging of compressors for various field applications. Processing equipment includes dehydration and liquids recovery, refrigeration and cryogenic processing, oil and natural gas separators, and amine sweetening to remove hydrogen sulfide or carbon dioxide. Electric power units can be natural-gas fired or electric. The Company also delivers systems to treat water from engineering to manufacturing, construction, and commissioning ranging in volumes from approximately 158 m³ to 160,000 m³ of water per day.

Based on our suppliers' responses, Enerflex has determined many of the products we manufacture include gold, tantalum, tin and/or tungsten (collectively, "3TG materials"). These 3TG materials are necessary to the functionality or production of our products. Enerflex is required to comply with Rule 13p-1 of the Securities Exchange Act of 1934, as amended ("Exchange Act"), as implemented through the Securities and Exchange Commission ("SEC") Form SD ("Rule 13p-1"), which requires, among other things, that it file this Conflict Minerals Report (this "Report"). This Report covers the period from January 1, 2022 through December 31, 2022.

Conflict Minerals Program Overview

Enerflex has taken a number of steps to implement a conflict minerals compliance program, including:

- Enerflex has assembled an internal team to support supply chain due diligence.

- Enerflex is working with its suppliers, and has identified many of the smelters or refiners (“SORs”) in its supply chain and plans to take measures intended to increase the supplier response rate for its reasonable country of origin inquiry (“RCOI”) process.
- Enerflex has compared its RCOI results with information collected via independent conflict free smelter validation programs such as the Conflict Free Smelter Program sponsored by the Conflict Free Sourcing Initiative (“CFSI”) an initiative of the Electronic Industry Citizenship Coalition and Global e-Sustainability Initiative (“EICC/GeSI”).
- Enerflex reports annually, as required by Rule 13p-1, on its sourcing due diligence efforts. This Report and the Form SD of which it is a part of are publicly available on our website at www.enerflex.com.

Rule 13p-1 requires that Enerflex conduct, in good faith, a RCOI that is reasonably designed to determine whether any of its 3TG materials originated in the Democratic Republic of the Congo or an adjoining country (each, a “covered country” and together, “DRC”). For 3TG materials that, based on our RCOI, Enerflex knows originated in, or it has reason to believe may have, originated in, a covered country, Rule 13p-1 requires that Enerflex exercise due diligence on the source and chain of custody of such 3TG materials.

Enerflex’s manufactured products were primarily assembled using components obtained from its suppliers. Enerflex is several tiers removed from mining operations and SORs and has no visibility into the upstream supply chain beyond its direct suppliers. Enerflex thus had to request its suppliers’ assistance in collecting information regarding the presence of 3TG materials in the components supplied to Enerflex and, if present, information regarding the sourcing of such 3TG materials.

Information on the presence and sourcing of 3TG materials in the components supplied to Enerflex was collected and stored using an online platform provided by a third party vendor, Source Intelligence. This platform utilized the EICC-GeSI Conflict Minerals Due Diligence Template (the “EICC-GeSI Template”), which includes standard supply chain survey and information tracking methods, to determine whether Enerflex’s manufactured products contained 3TG materials minerals necessary to their functionality or production and to perform its RCOI. In an effort to increase awareness among Enerflex’s suppliers of its conflict minerals compliance program, as well as the applicable SEC regulations and related frequently asked questions (“FAQs”) concerning conflict minerals compliance, Source Intelligence introduced each of Enerflex’s suppliers to the Conflict Minerals Supplier Resource Center maintained by Source Intelligence on its website. Enerflex undertook this step as an elevated tool to facilitate a deeper understanding of its conflict minerals program and why Enerflex is requesting information from them.

Conflict Minerals Compliance Program (CMCP) Description

The U.S. Securities and Exchange Commission (SEC) Final Conflict Minerals Rule ⁽¹⁾ (SEC Final Rule) requires a three-step compliance process: the first step is determining the applicability of the rule; the second step is conducting a RCOI to determine whether or not there is reason to believe that 3TG, also referred to as conflict minerals, from the Democratic Republic of Congo or adjoining countries are present in the company’s products; and if so, the third step is conducting due diligence to determine the source and origin of those conflict minerals based on the facilities SORs in which they were processed. Companies requiring due diligence must use a nationally or internationally recognized standard such as the OECD Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas (OECD Guidance ⁽²⁾) to meet the SEC regulatory requirements. The sections below describe Source Intelligence’s approach to meet each of the three steps in the SEC Final Rule compliance process; these activities were completed in concert with Enerflex’s internal regulatory compliance program activities.

(1) Securities and Exchange Commission, 17 CFR Parts 240 and 249b, <http://www.sec.gov/rules/final/2012/34-67716.pdf>.
(2) OECD Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas, <http://www.oecd.org/daf/inv/mne/GuidanceEdition2.pdf>.

SEC Final Rule Applicability Determination

The first step in SEC Final Rule compliance is examining rule applicability to a given organization’s activities. According to the Final Rule, there are four decision criteria: (1) whether the organization files reports with the SEC under Sections 13(a) or 15(d) of the Exchange Act; (2) whether the organization manufactures or contracts to manufacture products; (3) whether conflict minerals are “necessary to the functionality” or “necessary to the production” of such products and (4) whether the necessary conflict minerals were outside the supply chain prior to January 31, 2013.⁽³⁾

To aid Enerflex in the supplier scoping process, all Tier 1 suppliers were included in the RCOI performed by Source Intelligence. Prior to being asked to provide conflict minerals data, suppliers were asked a series of questions to determine whether the products they supply to Enerflex contain 3TG which is necessary to the functionality or production, whether Enerflex influences the design of such products, and whether the products were supplied to Enerflex during the 2022 reporting year. This information was used to determine which suppliers were in scope for regulatory purposes and thus asked to provide additional conflict minerals information. Lists of suppliers classified as out of scope were provided to Enerflex for review and suppliers re-engaged as needed if requested by Enerflex based on additional information regarding the products they supply and the nature of the relationship with Enerflex.

Enerflex provided to Source Intelligence a list of Tier 1 suppliers determined to be in-scope for regulatory purposes based on Enerflex’s influence over the manufacturing process (i.e., meeting the manufacture or contract to manufacture definitions in Rule 13p-1) and potential use of 3TG. These suppliers were engaged following the RCOI process described below.

Reasonable Country of Origin Inquiry

To complete the RCOI required by the SEC Final Rule, Source Intelligence engaged Enerflex’s suppliers to collect information about the presence and sourcing of 3TG used in the products and components supplied to Enerflex. The program utilized the Conflict-Free Sourcing Initiative’s Conflict Minerals Reporting Template (CMRT). Only CMRT’s version 6.22 or higher were accepted. Suppliers were offered two options to submit the required information, either by uploading the CMRT in MS Excel format or by completing an online survey version of this template directly in the Source Intelligence platform. In certain cases, if a supplier was unable to complete on the platform, Enerflex or Source Intelligence uploaded the CMRT on their behalf.

Supplier Engagement

Enerflex provided Source Intelligence with at least one method of contact for each Tier 1 supplier designated as in-scope (email address, telephone number, facsimile number, or mailing address). Email was the preferred method of communication.

The RCOI began with an introduction email from Enerflex to suppliers describing the Conflict Minerals Compliance Program (CMCP) requirements and identifying Source Intelligence as a partner in the process. Following that introduction email, Source Intelligence sent a subsequent email to suppliers containing a registration and survey request link for the on-line data collection platform.

⁽³⁾ Conflict minerals are considered “outside the supply chain” if they were smelted or refined or were outside of a covered country prior to January 31, 2013.

Subsequent engagement followed these steps:

- Following the initial introductions to the program and information request, up to 7 reminder emails were sent to each non-responsive supplier requesting survey completion.

New Information Cut-off

In recognition that the information requested can take time to collect and aggregate, suppliers were given a final deadline of May 16, 2023 to provide information about the metal processors present in their supply chains for the 2022 reporting year.

Information Requested

Suppliers were asked to provide information regarding the sourcing of their materials with the ultimate goal of identifying the 3TG SORs and associated mine countries of origin. Suppliers who had already performed a RCOI through the use of the CMRT were asked to upload this document into the Source Intelligence system or to provide this information in the online survey version.

Enerflex chose to give their suppliers the ability to share information at a level with which they were most comfortable, i.e. company, product or user-defined, but the declaration scope had to be specified.

Suppliers were requested to provide an electronic signature before submitting their data to Enerflex to verify that all answers submitted were accurate to the best of the supplier's knowledge but the suppliers were not required to provide an electronic signature to submit their data.

Quality Assurance

Supplier responses were evaluated for plausibility, consistency, and gaps. If any of the following "quality control" (QC) flags were raised, suppliers were automatically contacted by the Source Intelligence platform on a bi-weekly basis up to 3 contacts.

- One or more SORs were listed for an unused metal;
- SOR information was not provided for a used metal, or SOR information provided was not a verified metal processor ⁽⁴⁾ ;
- Supplier answered yes to sourcing from the DRC, but none of the SORs listed are known to source from the region;
- Supplier indicated that they have not received conflict minerals data for each metal from all relevant suppliers;
- Supplier indicated they have not identified all of the SORs used for the products included in the declaration scope;
- Supplier indicated they have not provided all applicable SOR information received; and
- Supplier indicated 100% of the 3TG for products covered by the declaration originates from scrap/recycled sources, but one or more SORs listed are not known to be exclusive recyclers.

(4) Source Intelligence maintains a smelter/refiner database to document which companies are known metal processors (i.e., verified), which companies are exclusive recyclers, mine country of origin information, and DRC conflict-free certification status. Source Intelligence collects SOR data submitted by suppliers via CMRTs and compares it against its existing database. Supplier responses listing entities that are not verified smelters/refiners are flagged and suppliers are asked for further clarification.

**RCOI Results**

A total of 793 Tier 1 suppliers were identified as in-scope for conflict mineral regulatory purposes and contacted as part of the RCOI process conducted by Source Intelligence. The response rate among these suppliers was 24%. Of these responding suppliers, 36% indicated one or more of the regulated metals (3TG) as necessary to the functionality or production of the products they supply to Enerflex. Source Intelligence provided Enerflex a RY 2022 CMCP Data Summary with detailed information regarding the smelters/refiners reported to be in Enerflex’s supply chain and the associated mine countries of origin. Based on Source Intelligence’s smelter/refiner database, and as shown in the CMCP Data Summary, there was an indication of DRC sourcing or location in the DRC for 52 out of 344 verified smelters/refiners ⁽⁵⁾.

Source Intelligence Due Diligence Process

For those supply chains with SORs that are known or thought to be sourcing from the DRC, additional investigation is needed to determine the source and chain-of-custody of the regulated metals. Source Intelligence relies on the following internationally accepted audit standards to determine which SORs are considered “DRC Conflict Free”: the Responsible Minerals Assurance Process (RMAP), the London Bullion Market Association Good Delivery Program and the Responsible Jewellery Council Chain-of-Custody Certification. Source Intelligence has become an official vendor member of the Responsible Minerals Initiative (RMI) to further facilitate the exchange of supply chain data and technical information in the quest for global ethical sourcing of materials. This membership provides Source Intelligence access to the following working groups: Engage with the CMRT Development Team, Smelter Engagement Team, Smelter Data Management Team, RMI Stakeholders Call, and RMI Plenary.

If the SOR is not certified by these internationally-recognized schemes, Source Intelligence attempts to contact the SOR to gain more information about their sourcing practices, including countries of origin and transfer, and whether there are any internal due diligence procedures in place or other processes the SORs takes to track the chain-of-custody on the source of its mineral ores. Relevant information to review includes: whether the SOR has a documented, effective and communicated conflict-free policy, an accounting system to support a mass balance of materials processed, and traceability documentation. Internet research is also performed to determine whether there are any outside sources of information regarding the SOR’s sourcing practices. Up to three contact attempts are made by Source Intelligence to SORs to gather information on mine country of origin and sourcing practices.

A list of Enerflex’s SORs with indications of RMI Country Risk Levels along with certification statuses was provided in the Source Intelligence RY 2022 CMCP Data Summary.

Measures to Address Risks within the Supply Chain

In preparation for the due diligence performed for the reporting period, the Company worked with Source Intelligence to implement its due diligence efforts on the source and supply chain of its conflict minerals in order to mitigate the risk that its conflict minerals benefit armed groups in the covered countries, including by working with Source Intelligence to continue providing assistance and education for conflict minerals programs for our suppliers so that the compliance requirements can flow to more levels of our supply chain.

⁽⁵⁾ The information in the smelter/refiner database begins with supplier-provided information (CMRT data); Source Intelligence then performs additional research (internet, industry and government associations) and outreach (email and telephone) directly with these companies to confirm the data provided via CMRTs. The Source Intelligence Smelter Verification and Outreach Process includes research in an attempt to verify types of metal processing performed (including exclusive recycling), mine countries of origin, conflict-free certification status, and due diligence measures being conducted for those entities who are not conflict-free certified.

Independent Private Sector Audit

We have determined that a private sector audit is not required under Rule 13p-1 for 2022.
