Oman Sadad North Field

Gas and Liquids BOOM Processing Plant

We were tasked with delivering a 10 MMSCFD gas and 12,500 BBL/D liquids processing plant in Oman's Sadad North Field under a 10-year BOOM contract, with the option to extend. The plant needed to process gross fluids, export oil and gas via a 13 km pipeline and

We manufactured key components, including compressors, electric motors, refrigeration units, dew point control systems and power generation units. The project also featured inlet separation, control automation, and utilities. Local contractors were supervised during construction and installation to ensure seamless integration and operational readiness.

Outcome

This milestone BOOM project—one of the largest contracts ever signed outside North America—uses off-gas to power gas turbines, with surplus electricity sent to the client's grid.
