

Enerflex in action

Bahrain

70 MMSCFD build-own-operate- maintain compression solution

Effective operation and maintenance implementation across all three facilities.

Enerflex was engaged by an existing customer to provide a Build-Own-Operate-Maintain (BOOM) rental solution for three sour gas compressor stations totaling 70 MMSCFD.

These custom-designed facilities included two-phase separation, recovery oil, fuel gas conditioning, and extensive automation — including a built-in call-out function.

Enerflex provided the procurement, construction, commissioning, and start-up for this gas injection enhanced oil recovery project — and was also awarded the operations and maintenance contract for all three facilities.

Outcome

This multi-phase project showcases Enerflex's execution strengths and ability to deliver a fully integrated turnkey solution.

The equipment was delivered, installed, commissioned, and started-up ahead of schedule and within budget.
